Methodological Approaches to the Creation of Smart-library at the University

Baryshev R.A., Babina O.I., Pikov N.O.

Abstract

On the one hand, project «SFU Smart Library» is based on a reader's leading role in the library, on the other, on the automazed satisfying of reader's requirements. As we know the main purpose of university library reader (student), we understand requirements of education materials for contemporary subjects. SFU specialists work on the development of several automazed units pegged to personal account of a reader (student). Methodological part of the project represents revealing and satisfying university reader's requirements in the form of downloads and upgrading of recommended literature for contemporary subjects.

Key words: smart library definition, smart library concept, future of libraries.
